New Mexico Economic Narrative

- For most of post-Recession, the state's economic narrative has been driven by 'external factors' – oil boom & bust, Obamacare, even Intel job losses and uncertainty at national labs.
- In recent months, the state's economic narrative is less and less about external factors – oil prices and production are relatively stable, the economic gains due to Obamacare are largely absorbed (and now the state is beginning to pay its share).
- Where does the state on its own?

New Mexico Economic Current Situation

- QCEW says NM lost 537 jobs (-0.1%) in 2017Q1 after a loss of 2,500 (-0.3%) – First loss in two consecutive quarters since 2010.
- CES shows +0.7 for both 2016Q4 & 2017Q1, and +0.9% and 0.7% for 2017Q2 and Q3; BBER estimates 0.2% for 2017Q2 and Q3.
- Changing pattern—in 2017Q1 Mining -1,390 jobs, Healthcare +1,480 (in 2016, Mining -5,700 jobs and Healthcare +4,625 jobs).
- Personal income growth weak (2.0% in 2017Q1 & Q2). Compared to past two years, wage & salaries less of a drag (1.9%; 2016=0.5%) and transfers no longer a positive factor (-0.1%; 2014-2015=8.6%).
- Pressure on public finances less severe – Gross Receipts up 6.9% in 2017Q2; oil prices & production up.

Recent employment data based on surveys is strong. BBER is more cautious.

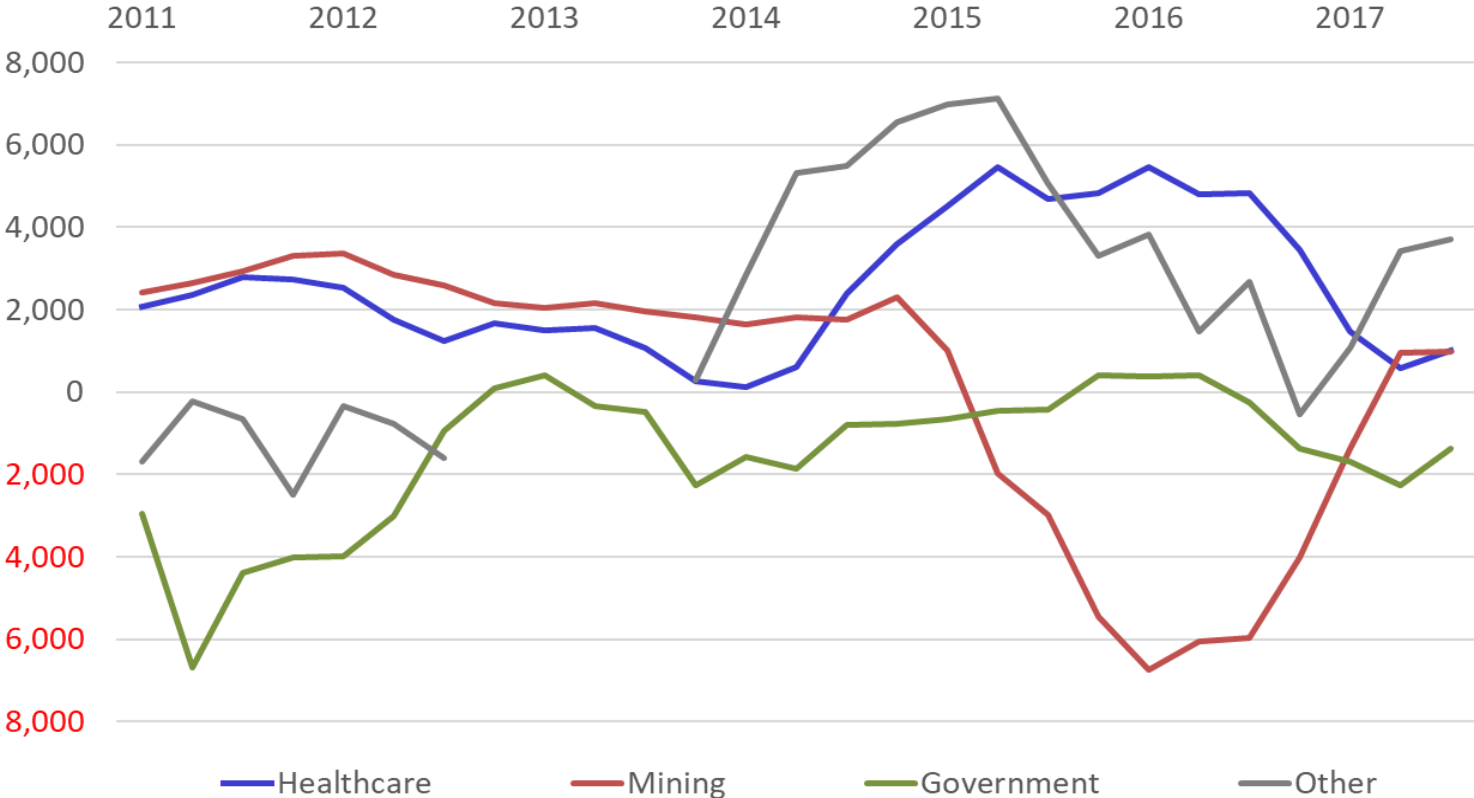

Sources: CES data available at time of FOR-UNM forecasts (pre-benchmarked); QCEW data current.

New Mexico's employment comparisons are improved.

Economic Outlook

Bureau of Business & Economic Research
THE UNIVERSITY *of* NEW MEXICO

New Mexico Economic Outlook: 2017-2022

- Weaker near term forecast due to disappointing 2017Q1 QCEW employment data, slow single family housing construction, and weaker IHS Global Insight forecast, especially for incomes.
- Jobs forecast gain 4,500 (0.6%) jobs in 2017Q4, closing the year +1,750 jobs (0.2%).
- Jobs forecast gain 6,900 jobs (0.9%) 2018, and 8,725/yr (1.1%/yr) in 2019-2022. This forecast is ~ 1,600 jobs (-0.2%) lower July forecast.
- Income forecast marked down further – 2.7% in 2018, average 4.2% in 2019-2022. This forecast marked down -0.8% in 2018 and -0.3% 2019-2022 due to weaker jobs forecast, lower investment/proprietors' incomes (from IHS Global Insight) and very weak transfers.
- Oil production to increase gradually, given slightly weaker price outlook.
- Impacts of pessimistic (20%) greater than optimistic (15%) scenario.
